

DIMENSION TEXT OVERRIDE (#20) + TEXT POSITION (#21)

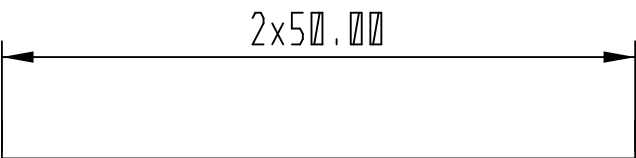

the value stays measured from the def points in every case below

no override -> the measurement

override "<> H7" -- <> = the measurement, so it tracks

override "2x<>"

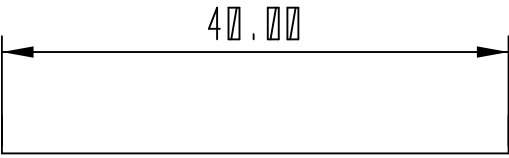

override "Ø<> THRU" -- control codes work

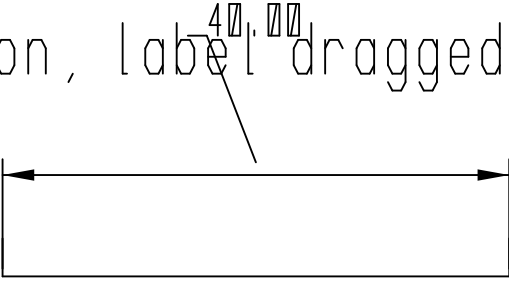

override with no <> -- replaces the value (explicit)

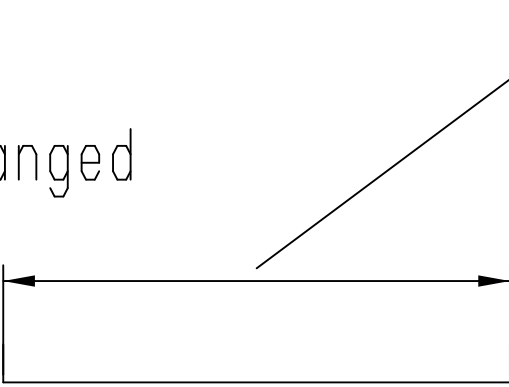

TEXT POSITION -- same dimension, label dragged; value unchanged

derived

nudged up

moved far -> connector leader

RADIUS / DIAMETER -- text moved clear of the part
